**RECREATION**
**The Perfect Answer to Control Corrosion on Recreational Equipment**

Fluid Film® is the perfect product for recreational equipment. For hunting and fishing gear, Fluid Film® provides a natural corrosion coating that displaces water and moisture, working in all weather and salt water environments. From water-fowling outings to deep-sea fishing, Fluid Film® protects guns and rods from rust and corrosion and provides long term lubrication to the tiniest of moving parts. For motorcycle chains and offroading vehicles, Fluid Film® provides a barrier of protection from mud and dirt, making a great chain lube where dirt will not build up and where clean up is just a rinse away. Use Fluid Film® today for all your recreation gear.

**"Prevents & stops rust on tools & equipment!"**

*"So...I...dragged out a **pistol** that had been used hard and put away **wet**; I sprayed Fluid Film on it and **BAM!** Not only did the dirt and powder residue bubble off the metal; it actually cleaned the copper fowling out of the barrel without using a wire bore brush...It's not often that you come across something that works better than advertised; but Fluid Film fits that niche. It also lubricates with a thin film that does not change viscosity due to temperature. That's a plus for cold weather shooting in a salty duck marsh." - Capt. Walt, New England Charters*

*"We use Fluid Film as part of our regular maintenance program for our fleet of 35 electric buggies and 30+ beach cruiser bicycles...In addition, local customers use it on their boats, bikes and in their homes. We even have repeat...customers who bought the product last winter and have returned to purchase multiple cans for use on their RV's." - Kathy Wilson, Nautical Wheelers*

- **ATV's:**  
Fluid Film® can be applied before four wheeling to make clean-up much easier. Dirt and mud will hose right off a coated surface. It is also an excellent chain lube and all around lubricant and corrosion preventive.
- **Bicycles:**  
Use Fluid Film® to lubricate bottom brackets, derailleur, headseats, hubs and seat posts. Use on all nuts and bolts, gears, levers and break cables.
- **Bicycle Chains:**  
Spray on chains, wipe off excess. Will leave a thin film which is resistant to dirt build-up, providing long term lubrication and protection from rust.
- **Boats**
- **Boat Trailers:**  
Apply to all electrical connections for lighting system, suspension leaf springs and spring hangers, hull rollers (bearings or bushings), hitch coupling connections, ball hitch, height Adjustors, winch, any exposed metal.
- **Camping Equipment**
- **Dirt Bike Swing Arm Bushings**
- **Exercise Equipment**

**YOUR LOCAL STOCKIST**

- **Firearms:**

Spray on rag and then rub down firearm, leaving a thin film residue which will not leave fingerprints or come off on hands or clothes. Tack-free mechanism lubrication. Use on bolts, slides and magazines. Will not affect bluing. Good for wood-stock.

- **Fishing Reels:**

Lightly coat to protect from salt spray. Use Fluid Film® to lubricate screws, bearings, cogs, drag washers and use as a protective coating.

- **Golf Carts**

- **Golf Clubs:**

Use Fluid Film® on steel shafts & heads in storage.

- **Jetskis**

- **Knives:**

Spray a small amount of Fluid Film® on a rag and rub in. Works great for protecting and lubricating folding knives.

- **Leather Hunting Boot Conditioner**

- **Motorcycle Chains:**

Spray Fluid Film® directly on the chain, wiping excess off with clean rag. Fluid Film® will migrate into all areas, providing long-lasting lubrication and protection from rust. There will be an initial dusting because of the non-drying application of the product, but Fluid Film® does not gum up or create a build-up of dirt.

YOUR LOCAL STOCKIST

- **Off-Roading:**

Apply Fluid Film® before off-roading so dirt and mud will wash off easier.

- **Roller Skates:**

Use Fluid Film® to lubricate bearings.

- **Outboard engines including interior housing from salt spray**

- **RV's:**

Use Fluid Film as an undercoating to protect from salt exposure and rust, for battery terminals, for awning hardware, trailer hitches, electrical connections and terminals, anywhere rust or corrosion could be a problem. Because of low water volume, Fluid Film is also an excellent release agent for use in RV toilets.

- **Scoters**

- **Skateboards**

- **Snowmobile:**

Spray on clutch to keep moisture from getting in or freezing, tail light lens to prevent snow from sticking.

- **Treadmill Belts**

- **Weights:**

Apply a thin film then rub in to keep weights rust free.
